

**IN THE ABSTRACT:**

Please amend the abstract to read as follows:

A table [4] including a clincher mechanism [8] is provided to be supported pivotably by a rear portion of a main body frame [2], the table [4] is integrally formed with a wing piece 9 projected along the main body frame [2], a locking [~~means 10, 16, 21~~] device is formed between the wing piece [9] of the table [4] and the main body frame [2], and by engaging the locking device [~~means 10, 16, 21~~] with the wing piece, a pivoting force in an opening direction of the table [4] is hampered.
